

Python Ultimate World: Week 3 Plan

Day 12: Classes & Objects (OOs Basics)

 **Documentation Requirement:** For your digital notes, you must document this topic exactly in these four categories: **Definition, Advantage, Disadvantage, Working.**

Task: Create a basic Class with state and behavior.

Day 13: Inheritance & Polymorphism

 **Documentation Requirement:** For your digital notes, you must document this topic exactly in these four categories: **Definition, Advantage, Disadvantage, Working.**

Task: Create a base class and inherited subclasses with overridden methods.

Day 14: Encapsulation & Abstraction

 **Documentation Requirement:** For your digital notes, you must document this topic exactly in these four categories: **Definition, Advantage, Disadvantage, Working.**

Task: Implement private variables and getter/setter methods.

Day 15: Magic / Dunder Methods

 **Documentation Requirement:** For your digital notes, you must document this topic exactly in these four categories: **Definition, Advantage, Disadvantage, Working.**

Task: Implement `__str__` and `__init__` for custom object representation.

Day 16: Modules & Packages

Documentation Requirement: For your digital notes, you must document this topic exactly in these four categories: **Definition, Advantage, Disadvantage, Working.**

Task: Split your classes into different .py files and import them.

Day 17: Virtual Environments (uv / pip)

Documentation Requirement: For your digital notes, you must document this topic exactly in these four categories: **Definition, Advantage, Disadvantage, Working.**

Task: Set up a clean virtual environment and install an external package.

Day 18_S: SUNDAY REVISION

Task: Build an OOP based Student Management System.
